DETAILED ACTION

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Rejections not maintained are withdrawn.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In newly amended claim 1, the phrases "high efficiency is attained" and "removal ... by air blowing" are unduly vague, indefinite and confusing.

Response to Amendment

5. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laurent (US 4346189) either taken individually, or in view of JP 2000258628A (Abstract and Derwent Abstract), substantially for the reasons set forth in section 3 of Paper No. 7 and section 4 of Paper No. 3, together with the following additional observations.

It is noted that newly amended claim 1 now recites in part "whereby high efficiency is attained in removal of excess powders by air blowing". The Examiner notes

Art Unit: 1771

that the newly added whereby clause fails to patentably distinguish the claimed invention.

With respect to Applicants' Response arguing that "Examiner's position is based upon a hindsight reconstruction of the references based upon Applicants' disclosure. Laurent does not disclose or suggest the use of non-tacky powders having a particular specific gravity value presently claimed" (Response, page 2, sixth paragraph), the Examiner reiterates (see section 3 of Paper No. 7) that Laurent expressly teaches that it is known art that laminate adhesive bleed or ooze can be overcome by rubbing the edges with a cloth bag filled with powder, such as zinc stearate that fixes itself to any adhesive at the edge and renders it non-tacky (column 1, lines 30-38). Further, the Examiner repeats (also see section 3 of Paper No. 7) that it is known that zinc stearate powder has an inherent density of 1.2, which is within the range of the gravity of the instant claimed invention, Applicants' remarks to the contrary notwithstanding.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Victor S Chang whose telephone number is 703-605-4296. The examiner can normally be reached on 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel H Morris can be reached on 703-308-2414. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.
